Sound Absorption RALTM-A23-124

FOUNDED 1918 BY WALLACE CLEMENT SABINE

Page 1 of 9

SPONSOR: Focal Point LLC Chicago, IL CONDUCTED: 2023-05-15

ON: LIA Standard Height - Lit (2 rows of 2 units each, rows and units spaced 36" apart)

TEST METHODOLOGY

Riverbank Acoustical Laboratories[™] is accredited by the U.S. Department of Commerce, National Institute of Standards and Technology (NIST) under the National Voluntary Laboratory Accreditation Program (NVLAP) as an ISO 17025:2017 Laboratory (NVLAP Lab Code: 100227-0) and for this test procedure. The test reported in this document conformed explicitly with ASTM C423-23: "Standard Test Method for Sound Absorption and Sound Absorption Coefficients by the Reverberation Room Method." The specimen mounting was performed according to ASTM E795-23: "Standard Practices for Mounting Test Specimens During Sound Absorption Tests." A description of the measurement procedure and room specifications are available upon request. The results presented in this report apply to the sample as received from the test sponsor.

INFORMATION PROVIDED BY SPONSOR

The test specimen was designated by the sponsor as LIA Standard Height - Lit (2 rows of 2 units each, rows and units spaced 36" apart). The following nominal product information was provided by the sponsor prior to testing. The accuracy of such sponsor-provided information can affect the validity of the test results.

Product Under Test

Product Name:	LIA Standard Height
Manufacturer:	Focal Point LLC

SPECIMEN MEASUREMENTS & TEST CONDITIONS

Through a full external visual inspection performed on the test specimen, Riverbank personnel verified the following information:

Test Specimen

Materials:	Felt fins radially attached to four cylindrical metal light units with felt tops
Diameter:	Light units @ 641 mm (25.25 in.)
	Light units with fins attached @ 889 mm (35 in.)
Depth:	Light units @ 117 mm (4.625 in.)
	Light units with fins attached @ 289 mm (11.375 in.)
Fin Thickness:	9.22 mm (0.363 in.)
Weights:	Light units @ 10.66 kg (23.5 lbs) each
_	Light units with fins attached @ 15.2 kg (33.5 lbs) each
Overall Weight:	60.78 kg (134 lbs)

RIVERBANK ACOUSTICAL LABORATORIES IS ACCREDITED BY NVLAP (LAB CODE 100227-0) FOR ACOUSTICAL TESTING SERVICES IN ACCORDANCE WITH ISO/IEC 17025:2017 AND FOR THIS PROCEDURE. THIS REPORT MUST NOT BE USED BY THE CLIENT TO CLAIM PRODUCT CERTIFICATION, APPROVAL, OR ENDORSEMENT BY RAL, NVLAP, NIST, OR ANY AGENCY OF THE U.S. GOVERNMENT. THIS REPORT SHALL NOT BE MODIFIED WITHOUT THE WRITTEN APPROVAL OF RAL. THE RESULTS REPORTED APPLY ONLY TO THE SPECIFIC SAMPLE SUBMITTED FOR TESTING; RAL ASSUMES NO RESPONSIBILITY FOR THE PERFORMANCE OF ANY OTHER SAMPLE.

Physical Measurements (per object)

Dimensions: 0.89 m (35.0 in) wide by 0.89 m (35.0 in) long Thickness: 0.29 m (11.375 in) Weight: 15.2 kg (33.5 lbs)

Test Environment

Room Volume:291.98 m³Temperature: $18.8 \ ^{\circ}C \pm 0.1 \ ^{\circ}C$ (Requirement: $\geq 10 \ ^{\circ}C$ and $\leq 5 \ ^{\circ}C$ change)Relative Humidity: $58.2 \ ^{\circ}{\pm} \pm 0.6 \ ^{\circ}{\otimes}$ (Requirement: $\geq 40 \ ^{\circ}{\otimes}$ and $\leq 5 \ ^{\circ}{\otimes}$ change)Barometric Pressure: $100.0 \ \text{kPa}$ (Requirement not defined)

MOUNTING METHOD

Type JH-MOD Mounting: The specimen is an array of 4 spaced sound absorbing objects suspended from cables such that the closest face is located approximately 787 mm (31 in.) from the horizontal test surface. This approximates the mounting method of a typical ceiling baffle installation. The objects were distributed in two rows of two objects each, with rows and objects in each row spaced 914 mm (36 in.) apart. The width of the installed object array was 2692 mm (106 in.) and the length of the installed object array was 2692 mm (106 in.) and the length of the object array was 13.0 m² (140 ft²).

Focal Point LLC 2023-05-15

TEST RESULTS

The preferred presentation of sound absorption test results for arrays of spaced objects is sound absorption (m^2) per object and total sound absorption (m^2) at each one-third-octave band

ASTM C423-23 Appendix X2 allows calculation of sound absorption per m^2 (SA/m²) based on the projected horizontal surface area attributable to an array of objects. The extended continuous surface area used in this calculation is to be determined the following procedure:

 $S_{array} = (w + w_1) \times (l + l_1)$ If the set of objects consists of a rectangular array of equal sized objects with equal space between each object in a row and equal space between rows. (ASTM E423-23 X.2.3.1)

Where:

 S_{array} = area of extended continuous surface attributed to the test specimen, m² w = the measured width of the installed object array, in meters w_l = the space between objects in the array along the width, in meters l = the measured length of the installed object array, in meters l_l = the space between objects in the array along the length, in meters

The sound absorption per m^2 (SA/m²) is calculated based on the following formula:

$$\alpha_{array} = (A_2 - A_1)/S_{array}$$

Where:

 α_{array} = sound absorption per m² (SA/m²) of extended continuous surface, no units, A₁ = absorption of the empty reverberation room, m² and A₂ = absorption of the room after the specimen has been installed, m². S_{array} = area of extended continuous surface attributed to the test specimen, m²

Tested by Report by Approved by Marc Sciaky Eric P. Wolfram Keith Kimberling Senior Experimentalist Test Engineer Laboratory Manager

Note: Sound absorption per m^2 (SA/ m^2), and therefore the reported Single Number Ratings, are highly dependent on the exact sample shape, size, spacing, and extended continuous surface area present in the test and subsequent calculations. Changes to any of these parameters will change the resulting values. These presented results are valid only for the specific configuration present in this test.
